

## How to Stilt Item #3073

### USA Platter

Platter should be raised up off the kiln shelf by 3 inches using 3" Tall stilts or standard stilts on 2 inch tall kiln posts.

The shelf above also needs to be 3 inches above the platter. Doing this, allows for adequate air circulation around the piece equalizing the heating up and cooling down of the platter.

Stilts should be placed on the same shelf and should **NOT** straddle two shelves.
